Containers without lids for use in handling processes. They are made of polyethylene which is highly resistant to impacts and has an optimal behaviour at low temperatures. The extra thickness of the containers makes them highly robust and endows them with excellent mechanical behaviour.

It is recommended that food should be thawed without its original packaging: place food in these containers to speed up the thawing process. To avoid cross-contamination of exudates during thawing, our drain tray should be used to ensure that liquids are kept separate from the thawing food.

In food thawing processes, the drain tray used must be high enough to adapt to the bottom of the container and to keep the exudate separate from the food itself, as this exudate contains moisture and nutrients which encourage the growth of bacteria that deteriorate food.

Las cubetas sin tapa para los procesos de

Compliance with all European regulations on materials and objects intended for food contact.

Optimum shape: Design and height that allow correct evacuation of exudate. They comply with the hygiene-health regulations that recommend preventing contact between the food and the exudate.

Óptima geometría: Diseño y altura que permite una correcta evacuación del exudado. Cumplen con la normativa higiénico-sanitaria que recomienda evitar el contacto entre el alimento y el exudado.

Rounded edges: Special design that avoids the accumulation of food remains, easier to clean.

Caros redondeados: Su especial diseño evita que se acumulen restos y facilita la limpieza.

Gastronorm sizes: Products designed and manufactured in accordance with the sizes and specifications established in EN 631. 1 standard.

Medidas Gastronorm: Productos diseñados y fabricados según dimensiones y especificaciones establecidas en la Norma EN 631. 1.

Ergonomics: Their ergonomic edges make handling easier. The deep containers have side handles.

Ergonomía: Su borde ergonómico facilita el manejo. Cubetas hondas provistas de asas laterales.
